BLUE ASH SCHOOL

Concrete Improvements Delivered on a School's Schedule

Blue Ash, Ohio

The Challenge

Eroding sidewalks and curbs are more than unsightly. For school districts, they can create real safety and legal risks. A school district in Blue Ash, Ohio, identified deteriorating concrete across its campus serving grades 7-12 and scheduled replacement work during the second half of summer break.

As a first-time customer, the district needed a partner who could execute the work flawlessly before students returned.

Our Approach

Quality Blacktopping + Concrete worked hand-in-hand with district leadership to clearly scope the project and proactively address challenges as they arose. The team moved efficiently, adjusting to field conditions while keeping the schedule on track.

Craftsmanship was a priority from day one. The crew delivered a precise picture-perfect finish with clean lines and a uniform appearance across the site. In addition, all work met compliance requirements.

The Result

The project team completed 8,700 square feet of concrete sidewalk, integral curb, and dumpster pads on schedule, delivering exactly what was promised before school was back in session. The level of finish reinforced the pride and care the district takes in maintaining its property.

Impressed by the team's attention to detail and professionalism, the district has awarded additional, larger projects to Quality, transforming a first project into a trusted partnership.

“Quality earned our trust on the first project by delivering flawless work on a tight timeline, and we've continued working with them ever since.”
