## JAIL AND JUVENILE FACILITY

### New Parking and Safe Access for County Jail and Juvenile Facility

Ohio

#### The Challenge

A county jail and juvenile facility in Ohio required additional parking and a new walking path to accommodate its growing staff.

The facilities manager was balancing multiple responsibilities and needed a partner who could simplify the process by taking ownership of the layout and scope of work. With security and safety considerations at stake, dependable execution was essential.

#### Our Approach

Quality Blacktopping + Concrete worked closely with the facilities manager to develop a practical solution that added parking and pedestrian access to the facility. By managing the layout and scope planning, the team removed a major task from the client's workload.

From design through installation, the focus remained on quality craftsmanship and safe operations. Quality handled the details while maintaining open communication and keeping the project aligned with the client's budget.

#### The Result

The completed parking lot and sidewalk now provide safer access for employees and additional space to support the facility's staff.

Just as important, the facilities manager was able to focus on other operational priorities while Quality managed the project from planning through completion. Delivered on time and within budget, the finished work reinforced the client's confidence in the Quality team.

“Quality took the layout and planning off our plate, delivering a solution that met our needs and stayed within budget.”
